

Lumenis brings technology for Skin Pigmentation

28 March 2018 | News

Naturalase QS - A new and advanced technology to successfully treat tattoo removal and skin pigmentation launched

Change in the lifestyle and changing latest trends have increased the demand for tattoo removals and skin rejuvenation especially among youngsters in the recent times. To address this challenge, Lumenis India have launched a technology 'Naturalase QS' for the first time in India.

Naturalase QS' is new advanced highest energy Q-switched system in the world and is used for skin pigmentation & tattoo removal. 'Naturalase QS' can successfully treat skin rejuvenation, tattoo removal (all colors), pigmented lesions, vascular lesions and hair removal with more energy and a better beam giving more accurate and better results.

The technology has been launched for the first time in India which is currently installed in Dr P.N Behl Skin Institute & School of Dermatology Hospital in New Delhi.

While the other laser treatments uses small spot sizes with high energy, which results in scarring and skin pigmentation changes, Naturalase QS offered deep penetration of the laser beam into the skin yet provide better protection to the top layer of the skin.

Dharmendra Mistry, Lumenis India & South Asia Country Head said "With the launch of Naturalase QS in India, there is an opportunity for those who regret their ink. People who wish to join armed forces due to strict job codes faces lot of problems to get removal of tattoos. Resultant to that many government & army hospitals could not easily address the tattoo removal cases. We are happy to announce the new innovative effective technology for the first time in India which will benefit all our stakeholders. Naturalase QS uses high energy levels, short pulse durations and wide treatments, which is more effective, quicker, safe and most comfortable treatments with better results and higher customer satisfaction, The high energy, nano quick laser pulse reaches deep into the skin where it shatters the natural or ink pigments into particles small enough to be cleared by the body's lymphatic system"

Dr Vikas Kapoor, Skin Institute & School of Dermatology, Senior Consultant said "Skin Institute is the first in the country to acquire Naturalase (Q-Switch laser). It is safe, effective, long lasting treatment for all skin problems. Naturalase is the latest technology to treat uneven skin tone, hyperpigmentation, freckles, tattoos and birth marks. This revolutionary service is a boon to dermatology. Naturalase is a powerful high energy Q-Switch laser. Confident of the results, The Skin Institute

assures and offers the best at affordable prices.”

Dr Poonam Sharma, Skin Institute & School of Dermatology, Senior Consultant said “Naturalase QS is an effective treatment for tattoos removal, Nevus of OTA & laser toning. There is 10-15% improvement in skin tone and visible lightening of pigmentation with each sitting. There is less downtime with the laser which adds to the patient satisfaction.”

Naturalase QS technology is also known as giant pulse formation, which is a technique in which a laser is made to produce a pulsed beam.

Naturalase QS offers four different wavelengths to effectively deal with a wide range of tattoo colors, on a wide range of skin types. Its four wavelengths- 1064nm, 532nm, 650nm & 585nm- target nine of the most frequently used tattoo colors ranging from light orange to dark black.
