

Saltigo to focus more on business opportunities in India

26 April 2018 | News

Saltigo at Chemspec India, April 25 to 26, 2018, Mumbai, to strengthen the business with selected multi-customer products.

Saltigo GmbH, a subsidiary of specialty chemicals company LANXESS, will be presenting its comprehensive expertise and longstanding experience as a reliable custom manufacturing service provider and producer of multi-customer products at Chemspec India 2018, which is being held in Mumbai from April 25 to 26.

“Saltigo has been participating in Chemspec India since 2010 and our presence here this year, too, only showcases our absolute confidence in the market potential that the Indian market has. We are aligned with our business targets and are working towards expanding our activities in the pharmaceutical and agrochemical segments. We look forward to strengthening our business with selected multi-customer products. We have also been successful in attracting customers from the specialty chemicals segment, where outsourcing is not yet a common practice, to our portfolio,” says Torsten Derr, Managing Director of Saltigo, summarizing the company's plans.

Combining an exhibition and conferences, this tradeshow is an important event in India offering buyers and sellers of high-quality chemicals, based on complex synthesis requirements, the opportunity to further develop business partnerships and to initiate new business.

The country is nowadays also a rapidly expanding market in the field of fine chemicals and active ingredients for pharmaceutical and crop protection applications.

Key areas of expertise here include phosgenation and halogenation – such as reactions involving hydrogen fluoride or phosphorus chlorides and the Halex reaction. Further examples are metal organic syntheses, e.g. by means of a Grignard reaction, which is run at Saltigo in a multi-1000 ton-scale including the production of the reagent.

“Also for our multi-customer products such as phosgene derivatives or 1,2,4-triazole, India is an important market. In addition, we strive for business with innovative companies specializing in photovoltaics, polymers, lubricants, flavor and fragrances and biocides,” he adds.

In addition, Saltigo is awaiting the registration of its insect repellent Saltidin (chemical name Icaridin) in India.

Insect repellents containing the active ingredient of Saltigo protect against infection with dangerous diseases, like the Zika virus or dengue fever, by keeping mosquitoes at bay.

Saltigo has reacted fast to the increased demand by increasing the production capacity significantly and has taken measures for additional capacity expansion.

Saltigo supplies products to some 150 customers from the agrochemical, pharmaceutical and fine chemicals industries.

These include active ingredients and intermediates for crop protection agents and medicines together with chemicals for numerous applications.
