

Ideal Cures launches new film coatings for pharma applications

05 July 2018 | News

INSTACOAT QD, quick disintegrating film coating product is revolutionary for pharmaceutical applications which provides fast disintegration of film within 3-30 seconds.

Ideal Cures, an Indian company headquartered in Mumbai, India, launched two new ready-to-use film coating products INSTACOAT QD and INSTACOAT T2F, at the 2nd Formulation and Drug Delivery Conclave (FDD), held on 15th-16th June 2018, at Hyderabad, India where more than 110 formulators of top India based pharma companies were present.

INSTACOAT QD, quick disintegrating film coating product is revolutionary for pharmaceutical applications which provides fast disintegration of film within 3-30 seconds.

INSTACOAT T2F is a brilliant ready-to-use coating product by Ideal Cures that is completely free from Talc and TiO₂. This product was developed because there have been many speculations, questions and concerns about talc and titanium dioxide as being carcinogenic. Hence, their use is discouraged in Europe and US.

Mr. Suresh Pareek, Managing Director of Ideal Cures Pvt. Ltd., who is also one of the inventors, said, "Ideal Cures is driven by its vision to provide the best solutions to the industry by continuously developing new and innovative products. We aimed to add another milestone to our mission of assisting the pharma industry with its need for better drug delivery systems and regulatory compliances with these two products."
