

Siemens Healthineers introduces a mobile C-arm, Cios Fit

27 December 2018 | News

Cios Fit is designed to help in improving quality of care, achieve efficient workflows, and profit from high uptime; thereby reducing avoidable costs.

Cios Fit-a multidisciplinary mobile C-arm ready for demanding environments, was introduced at the 63rd Annual Indian Orthopaedic Association Conference (IAOCON), Coimbatore, on November 28th, 2018; setting a benchmark in mobile C-arms. It was inaugurated by Dr.S Rajasekaran, Chairperson of AOSpine (International community of Spine Surgeons, headquartered in Switzerland).

Cios Fit is designed to help in improving quality of care, achieve efficient workflows, and profit from high uptime; thereby reducing avoidable costs. It is built for the tough job in the Operation Room (OR) where the equipment needs to deliver high quality imaging, be simplified in its usage and robust to last for long; while ensuring price point is not exceeded.

With Cios Fit-powerful imaging technology, the surgeons are able to maintain consistency with crystal clear images of anatomical structures, implants, screws and devices resulting in accurate treatment and thus improving patient experience.
