

Royal Philips unveils advanced imaging solutions in India

22 January 2019 | News

These solutions will equip clinicians with detailed information thereby resulting in diagnosis that is more confident.

Royal Philips, a global leader in health technology, recently unveiled its latest Imaging Systems range with solutions including the Next MR Wave (Ingenia Ambition, Ingenia Elition), Epiq Elite Ultrasound System, DigitalDiagnost C90 (Digital X-ray), Intellispace Discovery, Compressed SENSE and Philips IQon (CT) at IRIA 2019, the annual conference of Indian Radiological and Imaging Association, in Chandigarh.

Designed to connect people, data, and technology, these state-of-the-art innovations offer benefits including improved outcomes, enhanced patient experience, increased staff satisfaction and lowered cost of care delivery. These solutions will equip clinicians with detailed information thereby resulting in diagnosis that is more confident.

Bringing much-needed advances to the demanding application areas of imaging systems, Philips' Ingenia Ambition 1.5T MR is the latest advance in the MRI portfolio. Another innovation of the Ingenia range, Philips Ingenia Elition offers cutting-edge MR imaging techniques, while setting new standards for clinical research in 3.0T imaging based on superior gradient and RF designs.

Philips also announced a new and exciting MR clinical application-Compressed SENSE, which is a unique break through acceleration technique speeding up not only sequences but also the entire scan.
