

US-based real estate firm accelerates health & wellness across India

24 June 2021 | News

Delos' advanced air purification system is capable of capturing ultrafine particles and can reduce particles that carry airborne bacteria and viruses.

Delos™, a wellness real estate and technology company based in US, and Propstack, Mumbai-based real estate technology & data company, have announced a strategic collaboration to advance health and well-being in India.

Through the collaboration, Propstack will accelerate awareness of Delos' advanced air purification units to improve the quality of indoor environments across the country.

The concentration of pollutants indoors can exceed those outdoors, with both short and long term health impacts. Delos' advanced air purification system helps remediate air quality and pathogens, pollutant particles, expel odors and remove allergens.

In response to the current pandemic, air purification systems have been considered by many to be a critical supplementary approach to reducing virus transmission rates by removing airborne pollutants and contaminants. Delos' advanced air purification system is capable of capturing ultrafine particles and can reduce particles that carry airborne bacteria and viruses.

"From more than eight years of experience and extensive research, we know that our indoor environments can play a significant role in safeguarding our health and well-being. We are proud to collaborate with Propstack to make our science-backed solutions more accessible in India and advance health and wellness across the country," said Delos CEO and Founder Paul Scialla.
