

Jehangir Hospital launches upgraded centre for endoscopy in Pune

19 August 2021 | News

Enabling advanced cancer and GI care diagnosis

Jehangir Hospital, Pune-based institution, has announced the launch of an upgraded endoscopy centre for early diagnosis of gastro-intestinal (GI) cancers, empowered by EUS, or Endosonography.

With the advent of superior imaging technology in GI endoscopy, Jehangir Hospital added the latest instruments to position itself among the few institutions offering advanced GI care diagnosis.

The upgraded Centre for Endoscopy at Jehangir Hospital includes the latest Exera 3 Video Endoscopy system with 190 series endoscopes which enable distinct advantages like dual focus, brighter and higher contrast Narrow Band Imaging and Improved image quality. These factors are invaluable in early diagnosis of GI cancers and classification of colonic and gastric polyps without biopsies.

It also helps in diagnosing cancers at a very early stage, which can be usually cured without surgery. The new scopes also feature an integrated water jet channel helping the endoscopists to have a clearer view during haemostasis in actively bleeding patients or during complex therapeutic procedures.
