

Sakra becomes first to launch state-of-the-art Nursing Anne Simulator in Bengaluru

13 May 2024 | News

It has the ability to replicate a range of patient scenarios, meeting different training needs

Sakra World Hospital has launched its Nursing Simulation Lab in Bengaluru. The lab was inaugurated by Teddy Duthel, French Foreign Trade Advisor in India (CCE Inde), who is also the Managing Director of Sonovision Germany, Sonovision Aetos India, and Sonovision Production Centres, along with Ramona Simion, Head of Sonovision at ORTEC Group, in the presence of Lovekesh Phasu, Group Chief Operating Officer, Sakra World Hospital, Bengaluru.

With the launch, Sakra has become the first standalone corporate hospital in the city to introduce the Nursing Anne Simulator. The state-of-the-art simulator aims to enhance the capabilities of Sakra's nurses, empowering them to provide exceptional care with accuracy and proficiency.

The Nursing Anne Simulator is meticulously designed to meet the highest standards of realism and safety. It will empower Sakra's nurses to receive thorough training in a wide range of nursing skills, encompassing basic assessments to advanced interventions.

Its features, including spontaneous breathing and blinking eyes, replicate genuine patient responses, providing crucial practice in a controlled setting. This will allow nurses to sharpen their critical thinking, refine clinical procedures, and improve decision-making — all while prioritising patient safety.

Diverging from traditional training methods, the Nursing Anne Simulator guarantees an immersive and authentic learning experience. More importantly, the modular design of the simulator offers flexibility and versatility.
