

Ahmedabad University announces Bagchi School of Public Health

19 July 2024 | News

Prioritising rigorous structured Master's and PhD programmes in specific core public health disciplines

Ahmedabad University has announced the Bagchi School of Public Health. Established in 2023, the School is now named in honour of renowned philanthropists Susmita and Subroto Bagchi. The Bagchi School of Public Health aims to revolutionise public health education and research in India.

The Bagchi couple's transformative grant of Rs 55 crore will fuel the development of world-class physical, digital, and intellectual infrastructure. This investment empowers the School to become a global leader in public health education and research.

The Bagchi School leverages Ahmedabad University's unique interdisciplinary environment and integrates research, education, and action. The Bagchi School will break new ground by prioritising rigorous structured Master's and PhD programmes in specific core public health disciplines.

The School's flagship programme, a PhD in Epidemiology, equips students with the necessary advanced analytical as well as soft skills to tackle complex public health challenges, both ongoing and unforeseen.

Initial focus areas include Environmental Health, Analytical Methods for Health including Biostatistics and Data Science. This focus on specialisation and advanced analytical methods addresses a critical gap in India's public health education landscape.

Research will focus on discovering sustainable solutions to improve lifestyle, clinical practice, policy, and the environment.

The School's action arm will translate research findings into innovative, evidence-based initiatives and policies. The Bagchi School also fosters collaboration through the Sahyog Centre for Promoting Health, established in partnership with the Self Employed Women's Association (SEWA). This Centre empowers individuals, communities, and organisations to make healthy and eco-friendly choices.
