

RedVersity and IIT Roorkee launch executive programme in digital healthcare transformation

18 November 2025 | News

10-week programme blends live interactive sessions, case studies, and project-based learning

RedVersity, the academic arm of RED Health, and iHUB DivyaSampark at the Indian Institute of Technology (IIT) Roorkee have jointly announced the launch of the Executive Programme in Digital Healthcare Transformation — a 10-week online programme designed for senior healthcare administrators, clinicians, and medical practitioners who want to understand and lead the digital revolution transforming healthcare delivery in India and beyond.

The 10-week programme blends live interactive sessions, case studies, and project-based learning. Participants will explore a wide spectrum of subjects such as:

- The future of robotic surgery and automation in care delivery
- Telemedicine and virtual consultation models shaping access to healthcare

- Digital emergency response systems and connected ambulances
- The role of data analytics, AI, and machine learning in clinical decision-making
- Regulatory frameworks, cybersecurity, and patient data privacy in a digital era

The programme's multidisciplinary faculty will include leading academicians from IITs, senior healthcare executives, and experts from RED Health's emergency ecosystem — ensuring that participants learn directly from those pioneering change in their respective domains.
