

Novopor Advanced Science acquires FAR Chemical, expands US footprint

22 January 2026 | News

To build an integrated specialty chemical platform

Hyderabad-based Novopor Advanced Science, a Bain Capital portfolio company and global performance chemicals and material science CDMO, has announced the acquisition of FAR Chemical, a US-based leader in custom and complex specialty chemical manufacturing focused on Electronics, Aerospace & Defense, Coatings & Adhesives and other Specialty Chemicals, from its US parent CPS Performance Materials Group.

The acquisition of FAR Chemical is a key milestone in Novopor's strategy to build an integrated specialty chemical platform that delivers end-to-end solutions to customers ranging from early-stage process development to commercial scale manufacturing.

Integrating FAR Chemical's deep expertise in complex chemistries and attractive end markets complements Novopor's existing capabilities and expands its US presence.

Novopor Advanced Science, backed by Bain Capital, has been executing a strategy of targeted investments and acquisitions to expand its global footprint and technical portfolio. In 2025, Novopor acquired Pressure Chemical Company, a Pittsburgh-based specialty chemical and high-pressure chemistry expert, broadening its development-to-manufacturing capabilities and reinforcing its presence in the US market.

Additionally, Novopor inaugurated a state-of-the-art Pilot Plant Facility in Visakhapatnam, designed to bridge early-stage R&D with commercial-scale production and accelerate innovation across agrochemicals, performance materials, and specialty chemicals.
