R&D Systems introduces ProDots recombinant proteins

R&D Systems has launched ProDots Recombinant Proteins. ProDots proteins are highly bioactive proteins packaged into easy to use lyophilized "dots". Designed to be stable at 40C and to dissolve instantly, ProDots proteins can be rolled into cell culture media quickly and easily to produce media with a desired working protein concentration ensuring optimal protein recovery and bioactivity.

ProDots proteins are available as packs of 1, 10 or 50 individual vials containing one ball of protein in 5ug, 10ug & 250ug protein concentration.

The accessible storage and high stability of ProDots proteins makes them ideal for quick and easy preparation of cell culture media.
