

Lia Diagnostics got FDA approval for the first and only Flushable, Biodegradable Pregnancy Test

06 December 2017 | News

Lia has modernized the pregnancy test, ditching wasteful plastic and unnecessary electronics which is consumer and environment friendly

Lia Diagnostics, Inc. announced the U.S. Food and Drug Administration (FDA) 510(k) clearance for over-the-counter use of the Lia Pregnancy Test, the first and only FDA-cleared, flushable, biodegradable pregnancy test.

Lia features a proprietary coating technology, combined with nonwoven and paper techniques, that eliminates the need for plastic, creating a new category of water-dispersible, eco-friendly diagnostics.

Lia is more than 99% accurate when used on the day of your expected period. It is the result of years of research that combines the desire for discretion with sustainable materials and novel engineering into a pregnancy test that doesn't harm the earth.

Lia Diagnostics develops and commercializes water-dispersible, biodegradable diagnostic kits and products.

Founded by women based in Philadelphia, the company prides itself on modernizing and humanizing reproductive health and wellness products.

The company designs single-use diagnostics with the consumer and their unmet needs in mind, ensuring each product is both consumer and environmentally friendly.
